# 實驗項目-環境建置、開新專案與撰寫程式

#### 一、 本節目的:

● 建置 VC 2017 的開發環境

#### 二、 設計重點:

● 教你如何於 Windows 下建置 VC2017 的開發境與撰寫程式

## 三、 設計步驟:

- 1. 安裝 Microsoft Visual Studio 2017
- 2. 下載此版本: [Trial] Visual Studio Enterprise 2017 (version 15.9)
- 3. 下載網址:

https://my.visualstudio.com/Downloads?q=visual%20studio%202017&wt.mc\_id=o~msft~vscom~older-downloads

4. 軟體金鑰:

http://140.124.73.33/109%20%E9%AB%98%E9%9A%8E%E7%A8%8B%E5%BC%8F %E8%AA%9E%E8%A8%80/Software/

Step2-點選"安裝"

Step6-點選 "啟動 Visual Studio(S)"

### 5. 新增專案

Step1-在 C:\內建立一個資料夾 "c\_code",於 c\_code 資料夾內新增名為 "Ch1\_Lab1"的資料夾,再於 Ch1\_Lab1 資料夾內分別建立 include source temp,等資料夾,建立後需要在 temp 資料夾內新增名為 "debug"的資料夾,建立完成後如下圖

Step2-點選 "開始" -> "所有程式" 尋找 "Visual Studio 2017" 資料夾中的 "Visual Studio 2017"

Step3-開啟 Microsoft Visual Studio 視窗畫面後點選左上角 "開始(F)"

Step4-點選 "新增(N)"

Step5-點選 "專案(P)"

#### 6. 新增 .c 檔、路徑設定

Step2-點選"資源檔",按右鍵選"刪除(D)",完成後方案總管如下圖

Step11-點選後面的箭頭選擇編輯

# 8. 執行與測試程式結果
